MIS Automation (Business Intelligence) using Microsoft BI Technologies

Prosys designs and develops amazing customized MIS Automation (BI) Applications.

Prosys solutions are Non-Proprietary, they don't contain any source code and can easily be maintained by your IT teams. Consistent usage of Prosys solutions will get you business benefits like Improved DSO, Higher Inventory Turns, Reduced Working Capital, Faster Book Closure, etc..

Gartner's BI Magic Quadrant visualized in Power BI

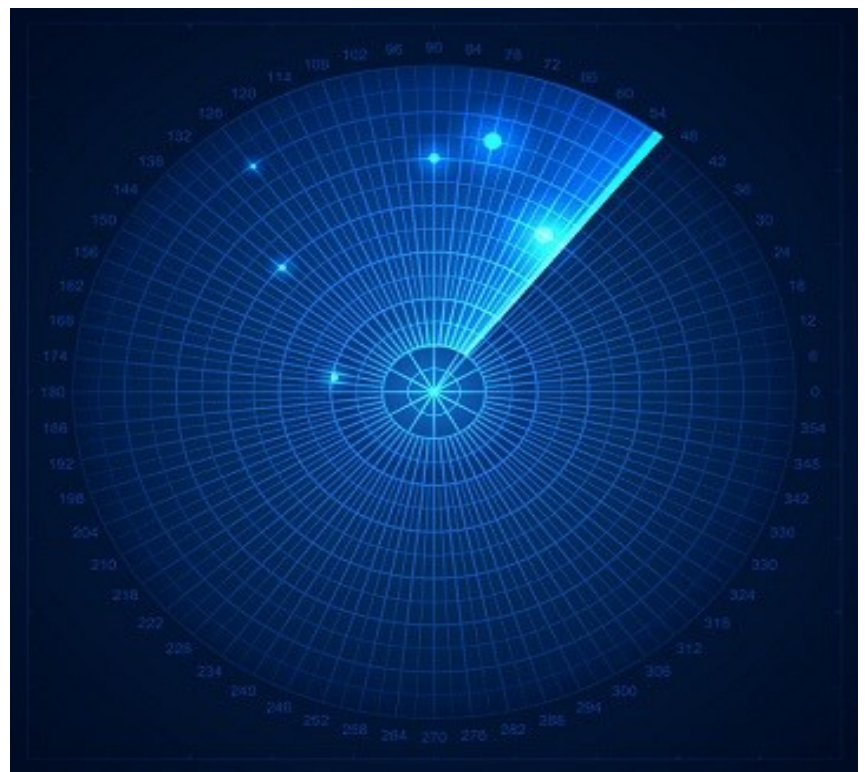

Friends,

Come February and Gartner publishes their report on the magic quadrant for Business Intelligence tools. This is the practice for the last 8-10 years.

Each year is a snapshot. Each year there is significant movement in the quadrant as some players move between challengers, niche players, visionaries and leaders.

New players come in and some players cease to even enter the quadrant. Some players move to become leaders, but unable to maintain that position. Some players remain leaders unchanged for several years.

It would be interesting to find out the movement of players across the past years. This has nothing to do with market share but only on the product's ability to execute and the completeness of vision of the player.

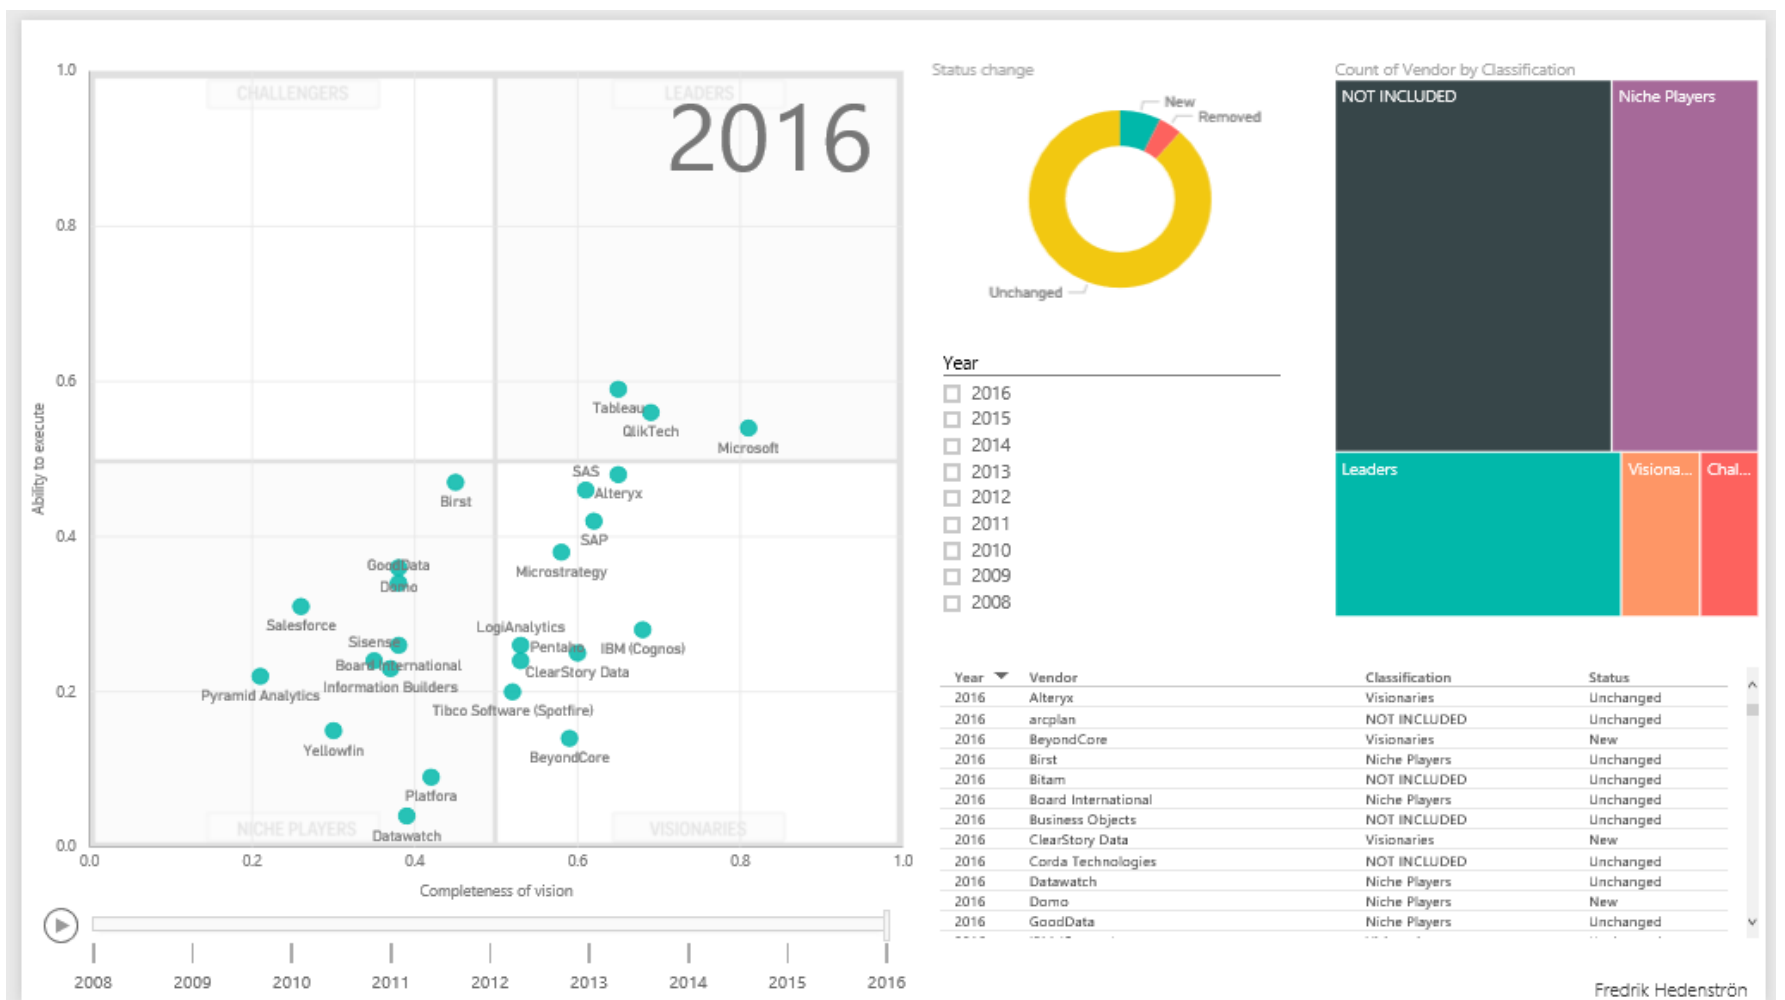

Fredrik Hedenström, a BI consultant created a model that can be visualized using PowerBI and has published the same for viewing to all with its new 'Publish to web' functionality.

This time we are sending you a link to this model, so that you can analyze this report the way you want.
