MIS Automation (Business Intelligence) using Microsoft BI Technologies

Prosys designs and develops amazing customized MIS Automation (BI) Applications.

Prosys solutions are Non-Proprietary , they don't contain any source code and can easily be maintained by your IT teams. Consistent usage of Prosys solutions will get you business benefits like Improved DSO, Higher Inventory Turns , Reduced Working Capital, Faster Book Closure, etc..

Top 3 Reasons to Upgrade Your Analytics Environment to SQL Server 2016

Posted by [Melissa Coates](#) on Feb 12, 2016 09:45

The release of [SQL Server 2016](#) represents a meaningful step forward in the technology capabilities for integrated delivery of business intelligence, data warehousing, analytics, and data science.

To highlight three of the most compelling new capabilities:

1. Integration with **R Services** opens up an immense number of possibilities for deep data analysis, data science, and custom data visualization. R Services allows a data scientist to do what he does best, alongside a database administrator to operationalize, secure, and oversee the analytics solution.

2. **Polybase** facilitates accessing Hadoop data structures using familiar SQL Server tools and language. This significantly lowers the entry point for starting to work with Big Data because it can more easily integrate different types of data. It also works with your favorite reporting tool such as Power BI or Reporting Services.

3. Last but not least, new security capabilities via **Row-Level Security, Always Encrypted, and Dynamic Data Masking** can be game-changers when it comes to safeguarding data. Having these features available natively as part of SQL Server will reduce the need for some customized solutions, freeing up developer time to create features of more value.

If you have additional questions about SQL Server 2016 we'd be happy to help. Please [contact us](#) today and we'll setup a call.
